

# QUICK REFERENCE

## Practice Version (Recommended for Your UI Design)

You asked for something more engaging and practical. Here it is.

## WHAT CHANGED

### ✗ Old (Quiz Version):

- Multiple choice questions
- Read examples, answer about them
- Passive learner experience
- Felt like a test

### ✓ New (Practice Version):

- Simulations with real consequences
- Learners DO things (write, mark, decide)
- Active, hands-on experience
- Feels like real lab practice

## THE TWO NEW PRACTICE FILES

### 1 OUTLINE (PRACTICAL)

**File:** `Practice-Bot-First-Contact_OUTLINE_PRACTICAL.md`

#### Use this to:

- Understand why the bot is designed this way
- Learn the pedagogy behind each cluster
- See learner paths and engagement features
- Know the design specifications

#### Key sections:

- Section 1: What is this bot? (Practice simulator, not quiz)
- Section 4: The five clusters (detailed)

Section 5: Key design principles (simulation, consequences, etc.)

Section 12: All 18 screens you need to design

## **2 CONVERSATION FLOW (PRACTICAL)**

**File:** `Practice-Bot-First-Contact_FLOW_PRACTICAL.md`

**Use this to:**

See every screen the user will encounter

Know exact text/content for each screen

Understand what learner does on each screen

See how screens flow together

**Follow this for UI mockup creation** (screen by screen)

**Key sections:**

Entry Gate: Welcome

Cluster 1: Approval simulation (4 screens)

Cluster 2: Safe sign-up (2 screens)

Cluster 3: Write thin → clear request (5 screens)

Cluster 4: See your output (2 screens)

Cluster 5: Mark and check output (3 screens)

Completion: Summary

Total: 18 screens

## **HOW TO USE FOR UI DESIGN**

### **Step 1: Read Overview (15 min)**

Open `OUTLINE_PRACTICAL.md`

Section 1-2: Understand what a "practice simulator" means

Section 5: Learn key design principles

Understand: This is hands-on, not a quiz

### **Step 2: Read One Cluster Example (10 min)**

Open `FLOW_PRACTICAL.md`

Read Cluster 1 completely (Entry Gate → C1-S1 → C1-S2 → C1-S3 → C1-S4)

Notice: Scenario → Choice → Consequence → Learning → Success path

### Step 3: Design All Screens (4-6 hours)

Go through FLOW\_PRACTICAL.md screen by screen

Each screen shows:

**Content** (exact text that appears)

**Interaction** (what learner does: types, clicks, chooses)

**Next action** (what button appears)

Create mockup for each screen

### Step 4: Reference Back to Outline

When you need to understand "why" something is designed this way

Check OUTLINE\_PRACTICAL.md for context

## KEY DIFFERENCES (Quick Summary)

### Cluster 1: APPROVAL SEARCH

**Quiz Version:** "Choose: Should you approve? A, B, C, D?"

**Practice Version:**

"Your friend offers you a tool. What do you do?"

If you pick "just try it" → See consequence (spam texts, data sold)

If you pick "ask or search" → Find the approval list + learn why

Learner experiences the consequence, not just reads about it

### Cluster 2: SAFE SIGN-UP

**Quiz Version:** "Check which fields are safe"

**Practice Version:**

Learner fills a form with all fields

Consequence: "You got marketing calls. Your phone was sold."

Learner realizes: Only enter safe data

Learner tries again with just Name + Email

Success: "Smart choices!"

### Cluster 3: WRITE REQUEST

**Quiz Version:** Read example, answer check question

### Practice Version:

Learner WRITES thin request ("Write an email")

Bot shows: "Generic output. Not useful."

Learner REWRITES clear request with four parts

Bot shows: "Much better! Now useful."

Learner SEES actual output based on their clear request

Learns by doing, not reading

## Cluster 4: SEE OUTPUT

**Quiz Version:** Doesn't really exist

### Practice Version:

Learner sees actual AI response based on their clear request

Proof that clear requests work

Motivating moment

## Cluster 5: CHECK OUTPUT

**Quiz Version:** Mark issues in an example

### Practice Version:

Real scenario: "Your classmate's study guide needs checking"

Learner marks actual issues (oil price, RBI dates, vague claims)

Learner explains WHY each needs checking

Professional-level practice

# THE 18 SCREENS TO DESIGN

## Entry Gate

- Welcome screen

## Cluster 1: APPROVAL

- Scenario question
- Consequence screen (if wrong)
- Where to find list? (retry)
- Success + lesson

## Cluster 2: SAFE SIGN-UP

- Sign-up form (which fields safe?)
- Consequence screen (if overshared)
- OR Success screen (if safe)

## Cluster 3: WRITE REQUEST

- Thin vs. Clear example
- Four-part formula
- Write thin request
- Feedback + rewrite request
- Feedback on clear version

## Cluster 4: SEE OUTPUT

- Processing screen
- Your AI output + celebration

## Cluster 5: CHECK OUTPUT

- Classmate's study guide
- Mark and explain issues
- Feedback + celebration

## Completion

- Summary + what you learned

# DESIGN SPECIFICATIONS

## Color Palette:

Background: #FFFFFF or #F6F8FF

Text: #0E1B5C (deep navy)

Buttons: #3D5AFE (royal blue)

Success: #4CAF50 (green)

Alert: #FF9800 (amber, not scary red)

### Typography:

Headers: 18px, Bold

Body: 16px, Regular

Small: 14px, Regular

Minimum: 16px (readable)

### Layout:

Mobile-first (320px width)

Buttons 44px+ height

White space generous

One task per screen

## WHY THIS VERSION IS BETTER FOR VOCATIONAL LEARNERS

✓ **Hands-on:** Like their workshop training (not a quiz) ✓ **Consequences:** Real-world (spam texts, data sold - relatable) ✓ **Active:** Learner writes, marks, decides (not passive) ✓ **Safe to fail:** Lab environment (mistakes = learning) ✓ **Practical:** What they'll actually do in the real lab ✓ **Confidence-building:** "You did exactly what professionals do"

## QUICK CHECKLIST BEFORE DESIGNING

- ☐ I've read Outline section 1-2 (What is this bot?)
- ☐ I've read Outline section 5 (Design principles)
- ☐ I've read Flow section for Cluster 1 completely
- ☐ I understand: This is a practice simulator, not a quiz
- ☐ I know the 18 screens I need to design
- ☐ I have the color palette
- ☐ I'm ready to start with Entry Gate screen

**FILES IN /mnt/user-data/outputs/**

## Use these (Practice Version):

- ✓ Practice-Bot-First-Contact\_OUTLINE\_PRACTICAL.md
- ✓ Practice-Bot-First-Contact\_FLOW\_PRACTICAL.md
- ✓ COMPARISON\_QUIZ\_vs\_PRACTICE.md (understand the changes)
- ✓ QUICK\_REFERENCE.md (this file)

## Optional (Quiz Version - for comparison only):

- Practice-Bot-First-Contact\_OUTLINE\_ENGLISH.md (old quiz version)
- Practice-Bot-First-Contact\_FLOW\_ENGLISH.md (old quiz version)

# START HERE

Read: [COMPARISON\\_QUIZ\\_vs\\_PRACTICE.md](#) (10 min) → Understand why you asked for changes

Read: [Practice-Bot-First-Contact\\_OUTLINE\\_PRACTICAL.md](#) sections 1-5 (20 min) → Understand the design philosophy

Read: [Practice-Bot-First-Contact\\_FLOW\\_PRACTICAL.md](#) Entry Gate + Cluster 1 (15 min) → See how it actually works

Start designing! → Entry Gate screen first → Then Cluster 1 (4 screens) → Follow the same pattern for all 18 screens

**You were right. The original was too quiz-like. This practice version is much better for a lab activity. Now you have practical, hands-on content perfect for ITI/vocational learners.**
